

Dr. **Lee M. Silver** is a professor at Princeton University in the Department of Molecular Biology and the Woodrow Wilson School of Public and International Affairs. He also has joint appointments in the Program in Science, Technology, and Environmental Policy, the Center for Health and Wellbeing, the Office of Population Research, and the Princeton Environmental Institute, all at Princeton University. In 1973, he received a Bachelor's degree and a Master's degree in physics from the University of Pennsylvania, and in 1978, he received a doctorate in biophysics from Harvard University. Before arriving at Princeton in 1984, he trained at New York's Memorial Sloan-Kettering Cancer Center and the Cold Spring Harbor Laboratory, which was directed by Nobel Laureate James D. Watson. An internationally renowned molecular biologist and expert on biomedical ethics, legal issues, and the societal challenges posed by advances in biotechnology, Silver is the author of many publications, including *Mouse Genetics: Concepts and Practice*, and *Remaking Eden: Cloning and Beyond in a Brave New World*, which has been published in 14 languages since its initial publication in 1997. The primary focus of that book is the ethical concerns and legal issues that arise from the technological advances that were, until recently, found only in science fiction. These issues form the basis for Silver's new Woodrow Wilson School undergraduate course "Human Genetics, Reproduction, and Public Policy." Silver is the coeditor of the official journal of the International Mammalian Genome Society. He is a fellow of the American Association for the Advancement of Science and was a member of the New Jersey Bioethics Commission Task Force, formed to recommend reproductive policy position...
