

Stop! .....And think of a line from your favorite song or movie.

Now try and recall one from that special.....”mediocre “ movie that you saw fifteen years ago..... Right, neither can I.

No one can.

You’d be like Ray Charles in Yankee stadium.

Kim Kardashian in a spelling bee.

Lost.

We remember extremes. Extremely good. Extremely bad. But we can “apply” the “good” through our daily lives whether it’s jokingly or “I’m gonna do what Rhett Butler did when he had to deal with Scarlet O’Hara.”

Learning through laughter touches on the same dopamine released through the brain’s pleasure nodes when it’s confronted with the stimulus of having fun.

The neuroscience of reaching the brain positively for long-term effect is based on how open the mind is at the time of informational dissemination. In other word, you learn and retain more when you’re having fun.

Enter the expertise of **David Gorham**:

Take A two-time “comedy central” veteran with an appearance on nbc’s “last comic standing”. Now, parlay 24 years of “clean” stand-up comedy experience along with six and a half years of motivational speaking and keynote forays, mix it with three years as a corporate Trainer; stuff it into a single presentation, .....and you’ve got a package that’s locked, loaded, and custom-built for your group’s long-term learning and self improvement.

Now you know why you’re able to recite your favorite lines from your favorite 1970’s movies or even earlier. Because without even knowing it.....You “learned them.”

Welcome to the neuroscience of learning through laughter.

**David Gorham**
