Winn Schwartau, one of the country's leading experts on information security, infrastructure protection and electronic privacy is often referred to as the civilian architect of information warfare. He coined the term Electronic Pearl Harbor and was the Project Lead of the Manhattan Cyber Project Information Warfare and Electronic Civil Defense Team. Today, he balances his time between writing, lecturing, building corporate and national security awareness programs and consulting.

Schwartau's recent book, Cybershock is a non-technical look at hackers, hacking and how security affects families, companies and nations. It is meant for the average computer user or for organizations to help make their staffs aware of security concerns in the workplace.

His prior critically acclaimed publication Time Based Security, (1999) redefines the needs and premises of information security by offering a means to measure security in the protection of networks. His first non-fiction book, Information Warfare: Chaos on the Electronic Superhighway is the seminal work on the subject and became an instant 'must-read' security classic. It is a compelling, analysis of personal privacy, economic and industrial espionage, national security and defense. He calls for the creation of a National Information Policy, a Constitution in Cyberspace and an Electronic Bill of Rights. The sequel, Information Warfare: Cyberterrorism, Second Edition, was released in 1997. Published in May of 1996, his Complete Internet Business Toolkit is one of the first books to ever be banned from export out of the United States. He was a major contributor to both of AFCEA' s Cyberwars Books and several international books on CyberWar and Espionage.

Mr. Schwartau is also the author ...
